

Biologia Plantarum

Special issue of **Czech Society of Experimental Plant Biology**

Dear colleagues,

the Czech Society of Experimental Plant Biology (CSEPB) has been found in the early 1990s. However, it was a continuation of the previous long and successful activity of the Physiological Section of the Czechoslovak Botanical Society.

CSEPB appreciates *Biologia Plantarum*'s tradition, co-founded by great Czech plant physiologist prof. Bohumil Němec and we would like to merge forces with *Biologia Plantarum* to promote reliable and quality plant science under the traditional peer-review process with reasonable open access fees.

This special issue aims to provide another benefit for the members of CSEPB, who will have a publication fee for free. The obligatory condition for publication is that the member of CSEPB has to be either first or corresponding author of the publication. The special issue is open to a broad spectrum of plant science topics without focusing on particular ones.

For this special issue, we welcome original articles, reviews, mini-reviews or opinion pieces dedicated to various aspects of experimental plant biology.

All papers are peer-reviewed to the usual standards and must fit within the journal's scope. SI is open until the number of articles is used up. Please notify the attribution to the special issue during the submission process.

Guest Editors

Dr Martin Janda (President of CSEPB) and volunteer member(s) of the CSEPB council (depending on the topics of the submitted manuscripts)
